

A lecture on the ULTY-V plus given at the 4th Southeast Asia Regional HELE (High Efficiency, Low Emission) Online Seminar Hosted by NEDO and J-COAL

On March 2, we gave a lecture on the ULTY-V plus at a seminar hosted by the New Energy and Industrial Technology Development Organization (NEDO) and the Japan Carbon Frontier Organization with Innovative Technologies (J-COAL).

With the theme of “Seeking the Road to Net Zero (cutting greenhouse gas emissions to close to zero by achieving an overall balance between greenhouse gas emissions produced and greenhouse gas emissions taken out of the atmosphere),” this seminar introduced various decarbonization technologies to participants, such as government agencies, power companies, and think-tanks in Southeast Asian countries, to promote Japan’s high-efficiency, low-emission technologies.

The participants asked various questions, which was a great opportunity for us to promote the ULTY-V plus toward future marketing overseas.

We will continue helping to promote global sustainable growth and solve social issues through various initiatives, such as reducing greenhouse gas emissions and improving energy efficiency.
